Candidate Interview Assignment: Resume Parsing and Job Matching System (Without Using LLMs)

Objective

The objective of this assignment is to evaluate the candidate's ability to design and implement a rule-based Resume Parsing and Job Matching System without using any Large Language Models (LLMs).

The candidate must build logic to extract structured information from resumes and match resumes against provided Job Descriptions (JDs).

Important Constraint (Strictly Prohibited)

The candidate must NOT use any generative AI or LLM services.

- OpenAI / ChatGPT APIs
- Google Gemini
- Anthropic Claude
- Any AI-based resume parsing API
- Any SaaS that internally uses LLMs

Only rule-based, statistical, or traditional NLP methods are allowed.

Functional Requirements

1. Job Description Information Extraction

The system must extract the following fields from the JD:

1.1 Salary Extraction

Extract salary if present.

Examples:

- Salary: 12 LPA

- CTC: ₹10,00,000 per annum

1.2 Years of Experience Extraction

Extract total years of experience.

Candidate may calculate from date ranges if explicitly not mentioned.

Examples:

- 4 years of experience
- Fresher, Entry-Level

1.3 JD Skills Extraction

Extract all skills present in the JD using rule-based logic.

Examples: Java, Spring Boot, MySQL, Python, React, Docker.

2. Job Description Processing

Extract the following from each JD:

- Required Skills
- Optional Skills (if available)
- Job Description Summary (About Role)

3. Skill Mapping and Highlighting

The system must display ALL JD skills and indicate whether each skill exists in the resume.

Example output structure:

{ "skill": "Java", "presentInResume": true }

4. Matching Score Calculation

Matching score must be calculated based on JD skill match percentage.

Recommended formula:

Matching Score = (Matched JD Skills / Total JD Skills) × 100

Score must range between 0 and 100.

5. Expected Output JSON Format

```
{
  "name": "John Doe",
  "salary": "12 LPA",
  "yearOfExperience": 4.5,
  "resumeSkills": ["Java", "Spring Boot"],
  "matchingJobs": [
    {
      "jobId": "JD001",
      "role": "Backend Developer",
      "aboutRole": "Responsible for backend development.",
      "skillsAnalysis": [
        { "skill": "Java", "presentInResume": true },
        { "skill": "Kafka", "presentInResume": false }
      ],
      "matchingScore": 50
    }
  ]
}
```

Technical Requirements

Preferred Languages: Node.js

Allowed Libraries: regex, spaCy, NLTK, scikit-learn, pdf parsing libraries

Candidate must implement clean modular code.

Evaluation Criteria

- Extraction Accuracy (Salary, Experience, Skills) – 40%
- Matching Logic and Score Calculation – 25%
- Code Quality and Structure – 20%

- Performance and Efficiency – 10%
- Documentation – 5%

Bonus Points

- API implementation
- Database integration
- UI implementation
- Docker support

Submission Requirements

- GitHub Repository
- README with setup instructions
- Sample output JSON

Sample Job Description(JD):

Sample 1:

Riverside Research is an independent National Security Nonprofit dedicated to research and development in the national interest. We provide high-end technical services, research and development, and prototype solutions to some of the country's most challenging technical problems.

All Riverside Research opportunities require U.S. Citizenship.

Position Overview

Riverside Research's Applied Mathematics and Physics Solutions group is seeking a Scientific Programmer/Software Engineer to support development of high-performance large scale scientific simulation codes. The candidate will implement and test new techniques that advance the state-of-the-art in defense industry computational electromagnetic (CEM) tools. Work will be performed in collaboration with a diverse team, with backgrounds in CEM, physics, computer science, electrical engineering,

applied mathematics, and high-performance computing (HPC) at our facilities in Ohio (Dayton), New York (NYC), and Illinois (Champaign).

Responsibilities

Job Responsibilities :

- Supports all aspects of the software development lifecycle from requirements, design, development, documentation, testing (validation and verification) and debugging efficient scientific software applications
- Maintains code quality by participating in peer reviews of software and helping develop unit tests, verification and validation test plans, and performing validation and verification
- Applies new methods, algorithms, or processes, and evaluates and communicates conclusions
- Assists in establishing and maintaining standards and best practices for software development
- Evaluates new industry standards and best practices for suitable adoption
- Becomes a subject matter expert in computational methods, software engineering, high performance computing, applied mathematics/physics, and/or modeling and simulation
- Other duties as assigned

Qualifications

Required Qualifications :

- Ability to obtain and maintain a Top Secret/SCI Security Clearance
- Education and Experience:
- Degree in Computer Science, Software Engineering, Computational Science or closely related field with software development experience
- Bachelor's with 5+ years of experience, or
- Master's with 3+ years of experience
- PhD with 0+ years of experience
- Relevant years of experience may be substituted in lieu of a degree.
- Applied programming experience with low-level languages like C, C++ and/or Fortran
- Applied software development on and for Linux or other Unix-like systems

- Applied experience coding with Python, Unix shell scripting and similar languages for software development
- Experienced with version control software applications
- Ability to work independently and collaboratively with a team
- Excellent interpersonal and communications skills, written and verbal
- Willingness to learn and perform other duties as assigned
- Ability to travel (less than 10%)

Desired Qualifications

- Active Security Clearance, TS/SCI(with poly preferred)
- Experience working collaboratively on software development
- Experience with the full software development lifecycle (SDLC)
- Experience with parallel programming on high-performance computers (MPI and/or OpenMP)
- Experience developing cross-platform (Windows and Linux) software
- Additional STEM degree in physics, electrical engineering, or applied mathematics or experience developing software for scientific applications
- Familiarity with linear algebra and numerical solutions techniques or numerical algorithms
- Familiarity with electromagnetic wave theory

Global Comp

$180,000 - $220,000 This represents the typical compensation range for this position based on experience, location and other factors.

Closing Statement

Riverside Research Institute is a not-for-profit, technology-oriented defense company, where service to our customers and support of our staff is our overall mission. Riverside is an affirmative action-equal opportunity employer and complies with all applicable federal, state, and local laws regarding recruitment and hiring. Riverside offers comprehensive compensation and benefit packages to our employees.

Riverside bases its employment decisions solely on technical experience, qualifications and other job-related criteria related to our organizational purpose as a not-for-profit company, and without regard to race, color, religion, age, sex marital status, sexual orientation, national origin,

physical or mental disability, veteran's status or any other status legally protected by applicable federal, state, and local law.

Sample 2:

Choosing Capgemini means choosing a company where you will be empowered to shape your career in the way you'd like, where you'll be supported and inspired by a collaborative community of colleagues around the world, and where you'll be able to reimagine what's possible. Join us and help the world's leading organizations unlock the value of technology and build a more sustainable, more inclusive world.

Job Description

Should have 7 years of strong handson experience with Core Java Spring bootShould have 4 years of strong handson experience with Angular or React

Hands On experience Relational DatabaseMicrosoft SQL Server UDBDB2 or No SQL is required

city"

Works in the area of Software Engineering, which encompasses the development, maintenance and optimization of software solutions/ applications.1. Applies scientific methods to analyse and solve software engineering problems.2. He/she is responsible for the development and application of software engineering practice and knowledge, in research, design, development and maintenance.3. His/her work requires the exercise of original thought and judgement and the ability to supervise the technical and administrative work of other software engineers.4. The software engineer builds skills and expertise of his/her software engineering discipline to reach standard software engineer skills expectations for the applicable role, as defined in Professional Communities.5. The software engineer collaborates and acts as team player with other software engineers and stakeholders.

The base compensation range for this role in the posted location is: 61087 - 104364

Capgemini provides compensation range information in accordance with applicable national, state, provincial, and local pay transparency laws. The base compensation range listed for this position reflects the minimum and maximum target compensation Capgemini, in good faith, believes it may pay for the role at the time of this posting. This range may be subject to change as permitted by law.

The actual compensation offered to any candidate may fall outside of the posted range and will be determined based on multiple factors legally permitted in the applicable jurisdiction.

These may include, but are not limited to: Geographic location, Education and qualifications, Certifications and licenses, Relevant experience and skills, Seniority and performance, Market and business consideration, Internal pay equity.

It is not typical for candidates to be hired at or near the top of the posted compensation range.

In addition to base salary, this role may be eligible for additional compensation such as variable incentives, bonuses, or commissions, depending on the position and applicable laws.

Capgemini offers a comprehensive, non-negotiable benefits package to all

regular, full-time employees. In the U.S. and Canada, available benefits are determined by local policy and eligibility and may include:

- Paid time off based on employee grade (A-F), defined by policy: Vacation: 12-25 days, depending on grade, Company paid holidays, Personal Days, Sick Leave
- Medical, dental, and vision coverage (or provincial healthcare coordination in Canada)
- Retirement savings plans (e.g., 401(k) in the U.S., RRSP in Canada)
- Life and disability insurance
- Employee assistance programs
- Other benefits as provided by local policy and eligibility

Important Notice: Compensation (including bonuses, commissions, or other forms of incentive pay) is not considered earned, vested, or payable until it becomes due under the terms of applicable plans or agreements and is subject to Capgemini's discretion, consistent with applicable laws. The Company reserves the right to amend or withdraw compensation programs at any time, within the limits of applicable legislation.

Disclaimers

Capgemini is an Equal Opportunity Employer encouraging inclusion in the workplace. Capgemini also participates in the Partnership Accreditation in Indigenous Relations (PAIR) program which supports meaningful engagement with Indigenous communities across Canada by promoting fairness, accessibility, inclusion and respect. We value the rich cultural heritage and contributions of Indigenous Peoples and actively work to create a welcoming and respectful environment. All qualified applicants will receive consideration for employment without regard to race, national origin, gender identity/expression, age, religion, disability, sexual orientation, genetics, veteran status, marital status or any other characteristic protected by law.

This is a general description of the Duties, Responsibilities and Qualifications required for this position. Physical, mental, sensory or environmental demands may be referenced in an attempt to communicate the manner in which this position traditionally is performed. Whenever necessary to provide individuals with disabilities an equal employment opportunity, Capgemini will consider reasonable accommodations that might involve varying job requirements and/or changing the way this job is performed, provided that such accommodation does not pose an undue hardship. Capgemini is committed to providing reasonable

accommodation during our recruitment process. If you need assistance or accommodation, please reach out to your recruiting contact.

Please be aware that Capgemini may capture your image (video or screenshot) during the interview process and that image may be used for verification, including during the hiring and onboarding process.

Capgemini is a global business and technology transformation partner, helping organizations to accelerate their dual transition to a digital and sustainable world, while creating tangible impact for enterprises and society. It is a responsible and diverse group of 340,000 team members in more than 50 countries. With its strong over 55-year heritage, Capgemini is trusted by its clients to unlock the value of technology to address the entire breadth of their business needs. It delivers end-to-end services and solutions leveraging strengths from strategy and design to engineering, all fueled by its market leading capabilities in AI, generative AI, cloud and data, combined with its deep industry expertise and partner ecosystem.

Sample 3:

Our Company

Changing the world through digital experiences is what Adobe's all about. We give everyone—from emerging artists to global brands—everything they need to design and deliver exceptional digital experiences! We're passionate about empowering people to create beautiful and powerful images, videos, and apps, and transform how companies interact with customers across every screen.

We're on a mission to hire the very best and are committed to creating exceptional employee experiences where everyone is respected and has access to equal opportunity. We realize that new ideas can come from everywhere in the organization, and we know the next big idea could be yours!

The Opportunity

Adobe is seeking talented and passionate Software Engineer across all

organizations to help plan, design, develop, and test software systems or applications for software enhancements and new products used in local, networked, cloud-based or Internet-related computer programs and products.

What You'll Do

- Develop high-performance, reliable, testable, and maintainable code.
- Participating in all aspects of software development activities, including design, coding, code review, testing, bug fixing, and code/API documentation.
- Collaborate with engineers and participate in daily or weekly stand-ups and meetings.
- Grow with the support of your team and help others on the team grow by providing thoughtful feedback and uplifting those around you.
- Work both independently and collaboratively within a fast-paced development team, with clear, positive, and constructive communication.
- Additional responsibilities as needed based on the specific role or team.

What You Need To Succeed

- Bachelor's or Master's in Computer Science, Computer Engineering, Electrical Engineering, or equivalent experience required
- 5-7 + years of relevant experience
- Proficient in programming languages such as Python, Java, C++, etc.
- Strong technical background with analytical and problem-solving skills.
- Interest or experience in AI/ML concepts, with exposure to AI tools, is a plus.
- Familiarity with client-side frameworks and libraries like React, Angular, jQuery is a plus.
- Excellent problem-solving and debugging skills, and direct experience with DevOps in a SaaS environment is a plus.
- Customer-focused and have a real passion for quality and engineering excellence at scale.
- Excellent communication and collaboration skills.

Our compensation reflects the cost of labor across several U.S. geographic markets, and we pay differently based on those defined markets. The U.S. pay range for this position is $139,000 -- $257,550 annually. Pay within this range varies by work location and may also depend on job-related knowledge, skills, and experience. Your recruiter can share more about the specific salary range for the job location during the hiring process. In California, the pay range for this position is $177,900 - $257,550

At Adobe, for sales roles starting salaries are expressed as total target compensation (TTC = base + commission), and short-term incentives are in the form of sales commission plans. Non-sales roles starting salaries are expressed as base salary and short-term incentives are in the form of the Annual Incentive Plan (AIP).

In addition, certain roles may be eligible for long-term incentives in the form of a new hire equity award.

State-Specific Notices:

California:

Fair Chance Ordinances

Adobe will consider qualified applicants with arrest or conviction records for employment in accordance with state and local laws and “fair chance” ordinances.

Colorado:

Application Window Notice

If this role is open to hiring in Colorado (as listed on the job posting), the application window will remain open until at least the date and time stated above in Pacific Time, in compliance with Colorado pay transparency regulations. If this role does not have Colorado listed as a hiring location, no specific application window applies, and the posting may close at any time based on hiring needs.

Massachusetts:

Massachusetts Legal Notice

It is unlawful in Massachusetts to require or administer a lie detector test as a condition of employment or continued employment. An employer who violates this law shall be subject to criminal penalties and civil liability.

Adobe is proud to be an Equal Employment Opportunity employer. We do not discriminate based on gender, race or color, ethnicity or national origin, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other applicable characteristics protected by law. Learn more.

Adobe aims to make Adobe.com accessible to any and all users. If you have a disability or special need that requires accommodation to navigate our website or complete the application process, email accommodations@adobe.com or call (408) 536-3015.

Sample 4:

Astra's mission is to improve life on Earth from space by creating a healthier and more connected planet. Today, Astra offers one of the lowest cost-per-launch dedicated orbital launch services, and one of the industry's leading flight-proven electric propulsion systems for satellites, the Astra Spacecraft Engine.

The Team

Software is at the forefront of how we operate at Astra. As a vertically integrated rocket company, every decision we make is data-driven: from CAD designs to the launch of a rocket, we look for patterns and relationships at each stage of our design, manufacturing, test, and operations. This unprecedented level of integration requires equally vertically integrated software that gives insight into topics that matter, guiding our decisions.

The software team has always operated as a small, versatile team that punches above its weight. As we grow we want to maintain those cross-functional technical skillsets and embrace diversity in backgrounds because sometimes writing the best rocket company software in the world is like programming a synthesizer, and other times it is like sanding the rust off of an old cabinet.

The Opportunity

As a Software Engineer at Astra, you'll build systems that support rocket testing, manufacturing, and launch operations. You'll work closely with hardware and operations teams to develop tools for automation, data collection, and real-time analysis. This is a high-impact role with broad technical scope and direct influence on critical engineering workflows.

How You'll Fulfill Your Mission

- Develop and maintain Python-based systems for automating rocket testing, manufacturing, and launch operations.
- Build tools for real-time telemetry data collection and analysis to support rapid decision-making.
- Collaborate with teams across engineering, manufacturing, and launch to identify software needs and ship impactful solutions.
- Contribute to internal tools, APIs (REST/gRPC), and cloud-native infrastructure that enable fast iteration and high reliability.
- Troubleshoot and improve systems that must operate under high complexity and extreme conditions.

Why We Value You

- 3+ years of experience in software engineering, including production-level Python development
- Solid understanding of system design, data pipelines, and APIs
- Experience with cloud-native services (e.g., AWS, Kubernetes, Docker) and telemetry or time-series systems
- Familiarity with REST/gRPC APIs and common data serialization formats (e.g., JSON, YAML, Protobuf)
- Proven ability to deliver software in high-stakes or cross-functional environments
- Strong communication skills and a proactive mindset
- Bachelor's degree in Computer Science, Engineering, or a related field (or equivalent practical experience)

Desired Multipliers

- Experience in aerospace, robotics, or hardware-software systems
- Exposure to TypeScript, Go, or C/C++
- Open-source contributions or relevant side projects

The pay range for this role is: $130,000 - $160,000 per year

The stated compensation range reflects only the targeted base salary range in the San Francisco Bay Area *and excludes additional earnings such as bonus and benefits. If your salary requirements fall outside of the range, we still encourage you to apply.*

You do not need to match every listed expectation to apply for this position. Here at Astra, we know that diverse perspectives foster the innovation we need to be successful, and we are committed to building a team that encompasses a variety of backgrounds, experiences, and skills.

San Francisco Applicants: *Astra will consider applicants with arrest and conviction records (criminal histories) in a manner consistent with the San Francisco Fair Chance Ordinance.*

ITAR Requirements: This position requires compliance with U.S. Government space technology trade restrictions, specifically the International Trafficking in Arms Regulations (ITAR), Export Administration Regulations (EAR) and additional regulations governing satellite, launch vehicle, missile, and other related technologies. All jobs restricted by these regulations will be contingent upon the applicant's status as a documented U.S. Person or their ability to receive a trade license from the cognizant government agency; in addition to any required company background checks and in compliance with applicable U.S. and California laws. Similarly, positions requiring the ability to work on government contracts or a security clearance are also contingent upon the applicants ability to receive the appropriate clearance and be allowed to work on U.S. government contracts.

Sample 5:

Basic Qualifications

Programming experience required

Be able to understand SV CONOPS

Be able to troubleshoot issues with minimum supervision

Be able to collaborate with others

Job Description

Space is a critical domain, connecting our technologies, our security and our humanity. While others view space as a destination, we see it as a realm of possibilities, where we can do more — we can innovate, invest, inspire and integrate our capabilities to transform the future.

At Lockheed Martin Space, we aim to harness the full potential of space to cultivate innovation, reduce costs, and push the boundaries of what technology can achieve. We’re creating future-ready solutions, focusing on resiliency and urgency through our 21st Century Security® vision. We’re erasing boundaries and forming partnerships across industries and around the world. We’re advancing spacecraft and the workforce to fuel the next generation. And we’re re-imagining how space can connect us, ensuring security and prosperity.

Join us in shaping a new era in space and find a career that's built for you.

This position is contingent on program award expected Q2 2026

This position is for a Software Engineer supporting the Space Software Product Line Mobile

User Objective System Service Life Extension (MUOS

SLE) Software Systems Team. This role will support

Software Systems for MUOS SLE. Responsibilities could include working in a collaborative environment interacting

with peers and occasional customer interactions. This

includes supporting the development of Specifications and Interface Control Documents, test scenarios to test new capability or verify defect fix, mission problems or questions in computer language for solutions by means of data processing equipment. Supporting informal and formal test events, ensuring we meet customer standards and quality, and working in a lab environment.

Desired Skills

Python

Unit testing

Agile programming

Full stack development

STARS / EASY framework

Software testing

VM Infrastructure

Other Important Information

By applying to this job, you are expressing interest in this position and could be considered for other career opportunities where similar skills and requirements have been identified as a match. Should this match be identified you may be contacted for this and future openings.

Ability to work remotely

Onsite Full-time: The work associated with this position will be performed onsite at a designated Lockheed Martin facility.

Sample 6:

Who We Are

Applied Materials is a global leader in materials engineering solutions used to produce virtually every new chip and advanced display in the world. We design, build and service cutting-edge equipment that helps our customers manufacture display and semiconductor chips – the brains of devices we use every day. As the foundation of the global electronics industry, Applied enables the exciting technologies that literally connect our world – like AI and IoT. If you want to push the boundaries of materials science and engineering to create next generation technology, join us to deliver material innovation that changes the world.

What We Offer

Salary:

$176,000.00 - $242,000.00

Location:

Santa Clara,CA

You'll benefit from a supportive work culture that encourages you to learn, develop, and grow your career as you take on challenges and drive innovative solutions for our customers. We empower our team to push the boundaries of what is possible—while learning every day in a supportive leading global company. Visit our Careers website to learn more.

At Applied Materials, we care about the health and wellbeing of our employees. We're committed to providing programs and support that encourage personal and professional growth and care for you at work, at home, or wherever you may go. Learn more about our benefits.

As a Software Engineer at Applied Materials, you'll dive deep into ground-breaking technologies—like machine learning and AI—to craft novel software solutions that solve our customers' high-value problems. Our Software Engineers are responsible for designing, prototyping, developing, and debugging software solutions for semiconductor

equipment components and devices to ensure quality and functionality. You'll develop software documentation and test procedures, troubleshoot software problems, and communicate with internal customers to understand project requirements. As part of our team, you'll contribute your expertise in intricate systems, deciphering code, and anticipating software behaviors to ensure Applied remains the leader in the semiconductor and display sectors.

Role Responsibilities:

- Design and develop code for large scale complex software solutions for semiconductor equipment components and device with limited supervision
- Lead and execute complex software projects
- Define software specifications and test plan for test benches and the lab tools
- Communicate with internal and external customers for requirement analysis, project schedule and software troubleshooting
- Troubleshoot a wide range of complex, difficult software problems; perform tests on code and enhancements

Minimum Qualifications:

- Bachelor's degree in Computer Science, Electrical Engineering, Mathematics, Physics, or a related field.
- 7–10 years of related experience
- Extensive experience with controlling instrument/equipment requiring high precision and high repeatability

Preferred Qualifications:

- PhD degree in a related field
- Proficient in Modern C++, Python, C#/Java/Rust, machine learning, web service architecture, signal processing, computer vision, robotics, user interface design, mathematical modelling, numerical methods for physical simulation, GPU programming
- Extensive experience with development on embedded system and PyTorch
- Experience with FPGA is preferred
- Leadership skills to lead moderate-sized projects as needed

Additional Information

Time Type:

Full time

Employee Type:

Assignee / Regular

Travel:

Yes, 10% of the Time

Relocation Eligible:

Yes

The salary offered to a selected candidate will be based on multiple factors including location, hire grade, job-related knowledge, skills, experience, and with consideration of internal equity of our current team members. In addition to a comprehensive benefits package, candidates may be eligible for other forms of compensation such as participation in a bonus and a stock award program, as applicable.

For all sales roles, the posted salary range is the Target Total Cash (TTC) range for the role, which is the sum of base salary and target bonus amount at 100% goal achievement.

Applied Materials is an Equal Opportunity Employer. Qualified applicants will receive consideration for employment without regard to race, color, national origin, citizenship, ancestry, religion, creed, sex, sexual orientation, gender identity, age, disability, veteran or military status, or any other basis prohibited by law.

In addition, Applied endeavors to make our careers site accessible to all users. If you would like to contact us regarding accessibility of our website or need assistance completing the application process, please contact us via e-mail at Accommodations_Program@amat.com, or by calling our HR Direct Help Line at 877-612-7547, option 1, and following the prompts to speak to an HR Advisor. This contact is for accommodation requests only and cannot be used to inquire about the status of applications.

Sample 7:

Meta is seeking talented engineers to join our teams in building cutting-edge products that connect billions of people around the world. As a member of our team, you will have the opportunity to work on complex technical problems, build new features, and improve existing products across various platforms, including mobile devices and web applications. Our teams are constantly pushing the boundaries of user experience, and we're looking for passionate individuals who can help us advance the way people connect globally. If you're interested in joining a world-class team of industry veterans and working on exciting projects that have a significant impact, we encourage you to apply.

Software Engineer, Infrastructure Responsibilities:

- Collaborate with cross-functional teams (product, design, operations, infrastructure) to build innovative application experiences
- Implement custom user interfaces using latest programming techniques and technologies
- Develop reusable software components for interfacing with back-end platforms
- Analyze and optimize code for quality, efficiency, and performance
- Lead complex technical or product efforts and provide technical guidance to peers
- Architect efficient and scalable systems that drive complex applications
- Identify and resolve performance and scalability issues
- Work on a variety of coding languages and technologies
- Establish ownership of components, features, or systems with expert end-to-end understanding

Minimum Qualifications:

- Currently has, or is in the process of obtaining a Bachelor's degree in Computer Science, Computer Engineering, relevant technical field, or equivalent practical experience. Degree must be completed prior to joining Meta
- 2+ years of programming experience in a relevant language OR a PhD + 9 months programming experience in a relevant language
- Track record of setting technical direction for a team, driving consensus and successful cross-functional partnerships
- Experience building maintainable and testable code bases, including API design and unit testing techniques

Preferred Qualifications:

- Experience owning a component, feature or system
- Experience improving quality through thoughtful code reviews, appropriate testing, proper rollout, monitoring, and proactive changes
- Experience in programming languages such as C, C++, Java
- Exposure to architectural patterns of large scale software applications
- Experience designing, analyzing and improving efficiency, scalability, and stability of various system resources
- 2+ years of relevant experience building large-scale infrastructure applications or similar experience
- 1+ years of experience identifying, designing and completing medium to large features independently without guidance
- Experience with scripting languages such as Python, Javascript or Hack

About Meta:

Meta builds technologies that help people connect, find communities, and grow businesses. When Facebook launched in 2004, it changed the way people connect. Apps like Messenger, Instagram and WhatsApp further empowered billions around the world. Now, Meta is moving beyond 2D screens toward immersive experiences like augmented and virtual reality to help build the next evolution in social technology. People who choose to build their careers by building with us at Meta help shape a future that will take us beyond what digital connection makes possible today—beyond the constraints of screens, the limits of distance, and even the rules of physics.

Meta is proud to be an Equal Employment Opportunity and Affirmative Action employer. We do not discriminate based upon race, religion, color, national origin, sex (including pregnancy, childbirth, or related medical conditions), sexual orientation, gender, gender identity, gender expression, transgender status, sexual stereotypes, age, status as a protected veteran, status as an individual with a disability, or other applicable legally protected characteristics. We also consider qualified applicants with criminal histories, consistent with applicable federal, state and local law. Meta participates in the E-Verify program in certain locations, as required by law. Please note that Meta may leverage artificial intelligence and machine learning technologies in connection with applications for employment.

Meta is committed to providing reasonable accommodations for candidates with disabilities in our recruiting process. If you need any assistance or accommodations due to a disability, please let us know at accommodations-ext@meta.com.

$58.65/hour to $181,000/year + bonus + equity + benefits

Individual compensation is determined by skills, qualifications, experience, and location. Compensation details listed in this posting reflect the base hourly rate, monthly rate, or annual salary only, and do not include bonus, equity or sales incentives, if applicable. In addition to base compensation, Meta offers benefits. Learn more about benefits at Meta.

Sample 8:

At Accenture Federal Services, nothing matters more than helping the US federal government make the nation stronger and safer and life better for people. Our 13,000+ people are united in a shared purpose to pursue the limitless potential of technology and ingenuity for clients across defense, national security, public safety, civilian, and military health organizations.

Join Accenture Federal Services, a technology company within global Accenture. Recognized as a Glassdoor Top 100 Best Place to Work, we offer a collaborative and caring community where you feel like you belong and are empowered to grow, learn and thrive through hands-on experience, certifications, industry training and more.

Join us to drive positive, lasting change that moves missions and the government forward!

Job Description

Software application developer / engineer, supporting the design, development, integration, maintenance and enhancement of custom and/or systems.

Must have:

- Experience with software development
- Bachelors degree

Security Clearance:

- Active TS/SCI with polygraph clearance

As required by local law, Accenture Federal Services provides reasonable ranges of compensation for hired roles based on labor costs in the states of California, Colorado, Hawaii, Illinois, Maryland, Massachusetts, Minnesota, New Jersey, New York, Washington, Vermont, the District of Columbia, and the city of Cleveland. The base pay range for this position in these locations is shown below. Compensation for roles at Accenture Federal Services varies depending on a wide array of factors, including but not limited to office location, role, skill set, and level of experience. Accenture Federal Services offers a wide variety of benefits. You can find more information on benefits here. We accept applications on an on-going basis and there is no fixed deadline to apply.

The pay range for the states of California, Colorado, Hawaii, Illinois, Maryland, Massachusetts, Minnesota, New Jersey, New York, Washington, Vermont, the District of Columbia, and the city of Cleveland is:

$75,500—$131,200 USD

What We Believe

As a company wholly dedicated to serving the US federal government, we bring together the best talent to help reinvent how federal agencies operate and deliver greater value for their mission and the American people. We have an unwavering commitment to creating a culture in which all our people are respected, feel a sense of belonging, and have equal opportunity. As a business imperative, every person at Accenture Federal Services has the responsibility to create and sustain a culture where everyone feels welcomed and included. This is grounded in our core values and our experience that hiring and developing great people who reflect different perspectives, experiences, and backgrounds is key to driving innovation and delivering the results that our clients and the country count on.

Equal Employment Opportunity Statement

We believe that no one should be discriminated against because of their differences. All employment decisions shall be made without regard to age, race, creed, color, religion, sex, national origin, ancestry, disability

status, veteran status, sexual orientation, gender identity or expression, genetic information, marital status, citizenship status or any other basis as protected by federal, state, or local law. Our rich diversity makes us more innovative, more competitive, and more creative, which helps us better serve our clients and our communities. For details, view a copy of the Accenture Federal Services Equal Opportunity Policy Statement.

Accenture Federal Services is an Equal Employment Opportunity employer. Additionally, as an Affirmative Action Employer for Veterans and Individuals with Disabilities, Accenture Federal Services is committed to providing veteran employment opportunities to our service men and women.

Requesting An Accommodation

Accenture Federal Services is committed to providing equal employment opportunities for persons with disabilities or religious observances, including reasonable accommodation when needed. If you are hired by Accenture Federal Services and require accommodation to perform the essential functions of your role, you will be asked to participate in our reasonable accommodation process. Accommodations made to facilitate the recruiting process are not a guarantee of future or continued accommodations once hired.

If you are being considered for employment opportunities with Accenture Federal Services and need an accommodation for a disability or religious observance during the interview process or for the job you are interviewing for, please speak with your recruiter.

Other Employment Statements

Applicants for employment in the US must have work authorization that does not now or in the future require sponsorship of a visa for employment authorization in the United States.

Candidates who are currently employed by a client of Accenture Federal Services or an affiliated Accenture business may not be eligible for consideration.

Job candidates will not be obligated to disclose sealed or expunged records of conviction or arrest as part of the hiring process.

The Company will not discharge or in any other manner discriminate against employees or applicants because they have inquired about, discussed, or disclosed their own pay or the pay of another employee or applicant. Additionally, employees who have access to the compensation information of other employees or applicants as a part of their essential job functions cannot disclose the pay of other employees or applicants to individuals who do not otherwise have access to compensation information, unless the disclosure is (a) in response to a formal complaint or charge, (b) in furtherance of an investigation, proceeding, hearing, or action, including an investigation conducted by the employer, or (c) consistent with the Company's legal duty to furnish information.

California requires additional notifications for applicants and employees. If you are a California resident, live in or plan to work from Los Angeles County upon being hired for this position, please click here for additional important information.

Sample 9:

SpaceX was founded under the belief that a future where humanity is out exploring the stars is fundamentally more exciting than one where we are not. Today SpaceX is actively developing the technologies to make this possible, with the ultimate goal of enabling human life on Mars.

FULL STACK SOFTWARE ENGINEER (BUILD RELIABILITY)

We are seeking a Full Stack Software Engineer to design, develop, and continuously improve software solutions ensuring our vehicles can be built and flown reliably. This involves streamlining quality control processes, simplifying new product introduction, ensuring product traceability, as well as optimizing rocket and spacecraft reusability.

As a Full Stack Software Engineer on our Build Reliability team, you will engage with other SpaceX engineers to discover the needs of the mission and write highly reliable software which turns the mission into reality. You will be responsible for the complete life-cycle of the software you create, including development, testing, and support. You are the engineer that other engineers can count on; you are technical, you attack every problem with enthusiasm; you remove hurdles. You are a self-starter, team player, have the hunger to venture quickly into unknown areas and code and make the system work.

Aerospace experience is not required to be successful here - rather we look for smart, motivated, collaborative engineers who love solving problems and want to make an impact on a super inspiring mission.

RESPONSIBILITIES:

- Build highly reliable software solutions that may be used by users across SpaceX
- Own all aspects of software engineering and product development
- Act as a responsible engineer for various software products
- Maintain highest standards of excellence, never settle for the status quo
- Deep dive into your users' problems, find efficient solutions
- Provide strong technical leadership, focus on continuous improvement
- Seek out faults within our application suite or ERP suite and implement solutions to improve
- Track usage of Applications and features and suggest/implement features to improve them

BASIC QUALIFICATIONS:

- Bachelor's degree in computer science, engineering, math, or scientific discipline; OR 2+ years of professional experience building software in lieu of a degree
- Experience in full stack development

PREFERRED SKILLS AND EXPERIENCE:

- 5+ years of experience in web applications development
- Experience as an architect - proven ability to design and implement robust and scalable systems with flexible and scalable UI that meets future needs
- Expertise in C#, .NET, SQL, HTML, CSS, AngularJS, TypeScript
- Expertise in Python, PostgreSQL
- Deep understanding of object oriented programming and design principles
- Deep understanding of testing, continuous integration, build, deployment & continuous monitoring
- Experience scaling web applications and optimizing applications for performance
- Solid understanding of UI/UX design to provide intuitive applications

- Great creative and innovative problem-solving skills
- Initiative and the ability to work independently and collaborate within a team
- Experience developing software for manufacturing, production, or quality systems

ADDITIONAL REQUIREMENTS:

- Ability to work extended hours and weekends as needed
- Must be willing to travel – up to 10%

Pay Range:

COMPENSATION AND BENEFITS:

Software Engineer/Level I: $120,000.00 - $145,000.00/per year

Software Engineer/Level II: $140,000.00 - $170,000.00/per year

Your actual level and base salary will be determined on a case-by-case basis and may vary based on the following considerations: job-related knowledge and skills, education, and experience.

Base salary is just one part of your total rewards package at SpaceX. You may also be eligible for long-term incentives, in the form of company stock, stock options, or long-term cash awards, as well as potential discretionary bonuses and the ability to purchase additional stock at a discount through an Employee Stock Purchase Plan. You will also receive access to comprehensive medical, vision, and dental coverage, access to a 401(k) retirement plan, short and long-term disability insurance, life insurance, paid parental leave, and various other discounts and perks. You may also accrue 3 weeks of paid vacation and will be eligible for 10 or more paid holidays per year. Exempt employees are eligible for 5 days of sick leave per year.

SOFTWARE ENGINEER (FULL STACK) - BUILD RELIABILITY

We are seeking a Full Stack Software Engineer to design, develop, and continuously improve software solutions ensuring our vehicles can be built and flown reliably. This involves streamlining quality control processes, simplifying new product introduction, ensuring product traceability, as well as optimizing rocket and spacecraft reusability.

You may also accrue 3 weeks of paid vacation and will be eligible for 10 or more paid holidays per year. Exempt employees are eligible for 5 days of sick leave per year.

ITAR REQUIREMENTS:

- To conform to U.S. Government export regulations, applicant must be a (i) U.S. citizen or national, (ii) U.S. lawful, permanent resident (aka green card holder), (iii) Refugee under 8 U.S.C.
- 1157, or (iv) Asylee under 8 U.S.C.

- 1158, or be eligible to obtain the required authorizations from the U.S. Department of State. Learn more about the ITAR here.

SpaceX is an Equal Opportunity Employer; employment with SpaceX is governed on the basis of merit, competence and qualifications and will not be influenced in any manner by race, color, religion, gender, national origin/ethnicity, veteran status, disability status, age, sexual orientation, gender identity, marital status, mental or physical disability or any other legally protected status.

Applicants wishing to view a copy of SpaceX's Affirmative Action Plan for veterans and individuals with disabilities, or applicants requiring reasonable accommodation to the application/interview process should reach out to EEOCompliance@spacex.com.

Sample 10:

Chantilly, VA

TS/SCI with Poly

At Bcore, our strength comes from how we deliver impact to the mission. Whether it's architecting critical IT solutions, producing actionable intelligence, or developing cutting edge technology, we succeed because of the expertise, collaboration, and agility of our teams. Our Mission Services division combines enterprise IT, cloud solutions, DevSecOps, systems engineering, software development, and operational support. Bcore accelerates decisive advantage for warfighters and intelligence professionals by fusing human insight, rapid-fire engineering, precision-measured outcomes, and relentless grit into mission-ready solutions.

Do you want to join a team that is building tailored technical solutions to modernize our government's mission and our client's business? Do you have a desire to change how people work? Are you interested in helping to protect our nation's cyber interests? Join our growing team supporting customer missions as a Software Engineer in Chantilly, Virginia.

Required Qualifications

- Demonstrated experience with tools used with cloud services.
- Demonstrated experience establishing stateless implementations from architectures in cloud service providers.

- Demonstrated experience with configuration management and data repositories. Demonstrated experience with COTS products used in Linux and Windows environments.5. (Mandatory) Demonstrated experience using DevOps tools such as, Jenkins, Kubernetes, Chef, and Terraform.
- Demonstrated experience with tools used with cloud services.
- Demonstrated experience establishing stateless implementations from architectures in cloud service providers.
- Demonstrated experience with configuration management and data repositories.
- Demonstrated experience with COTS products used in Linux and Windows environments.
- Demonstrated experience using DevOps tools such as, Jenkins, Kubernetes, Chef, and Terraform.

Desired Qualifications

- Node JS
- React
- MySQL
- Python
- Bash
- Javascript
- Experience with UI development
- Experience with Back-end development

BCore is proud to be an equal opportunity workplace. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, national origin, disability status, protected veteran status, sexual orientation or any other characteristic protected by law.

Sample 11:

FishEye Software has an immediate opening for a skilled C++ Software Engineer to support the Cooperative Engagement Capability (CEC) Program. This program integrates advanced hardware and software to streamline radar data flow across naval platforms, enhancing the detection, tracking, and response to aerial threats. In this role, you will work closely with cross-functional teams to support system integration, testing, and validation, helping deliver a unified and accurate tactical

picture.

This position requires an Active Secret Clearance and is 100% on-site in Maynard, MA.

Key Responsibilities

- Design, implement, and test C++ software for real-time and embedded defense systems.
- Participate in design, code reviews, and verification to ensure high-quality, reliable software.
- Collaborate with cross-functional teams to define software requirements, interfaces, and integration plans.
- Troubleshoot, debug, and resolve complex technical challenges within multi-threaded and distributed systems.
- Contribute to ongoing improvements in development tools, processes, and coding standards.

Required Skills

- This position requires an Active Secret Clearance; US Citizenship is required.
- BS in Computer Science, Engineering, or related field
- Minimum of 4 years of hands-on C++ software development experience. We will consider candidates with varying levels of experience.
- Proficiency in Linux-based environments
- Familiarity with Agile methodologies, Scrum, and CI/CD practices
- Experience with real-time operating systems (RTOS) and embedded programming
- Proficiency with Git, ClearCase, SVN, or similar version control systems
- Strong analytical, problem-solving, and communication skills

Desired Skills

- Radar domain knowledge and/or experience in defense/aerospace systems

FishEye Software is proud to be recognized as one of the Boston Globe's Top Places to Work 2025. We offer a comprehensive benefits package featuring medical, dental, and vision insurance; short and long-term

disability; life insurance; paid vacation time, sick leave and holidays; 401(k) plan with company match - plus many more exceptional perks!

Salary Range

The annual salary range for this position is $ 80,000 - $190,000 USD. The final salary will be determined based on the selected candidate's education, experience, skills, certifications, and other relevant qualifications, as well as applicable client or government contractual rates.

This position requires eligibility to obtain a DOD Secret Security Clearance; US Citizenship is required. For more information visit the DCSA site.

FishEye's passion is building and supporting mission critical software and providing real time access to mission critical data. Come as you are, we welcome all applicants.

FishEye Software, Inc. is an Equal Opportunity/Affirmative Action employer, including individuals with disabilities and protected veterans and participates in E-Verify. For more information on our EOE and AAP programs, visit www.fisheyesoftware.com/careers.

- Please Note: FishEye does not accept applications from agencies, 3rd party vendors, or applications with incomplete information.

FishEye Software may conduct background checks, criminal background investigation, and/or security clearance investigation through 3rd party organizations.

Salary: $80000 - $190000 per year

Sample 11:

Basic Qualifications

Experience designing and documenting microservice-based architectures

Deep understanding of open architecture, cloud computing design, and security principles

Demonstrated proficiency in software development using Java or C#

UI/UX Development

Ability to obtain TS/SCI Clearance

Job Description

Space is a critical domain, connecting our technologies, our security and our humanity. While others view space as a destination, we see it as a realm of possibilities, where we can do more — we can innovate, invest, inspire and integrate our capabilities to transform the future.

At Lockheed Martin Space, we aim to harness the full potential of space to cultivate innovation, reduce costs, and push the boundaries of what technology can achieve. We’re creating future-ready solutions, focusing on resiliency and urgency through our 21st Century Security® vision. We’re erasing boundaries and forming partnerships across industries and around the world. We’re advancing spacecraft and the workforce to fuel the next generation. And we’re reimagining how space can connect us, ensuring security and prosperity.

Join us in shaping a new era in space and find a career that's built for you.

This position is for a full-stack software engineer on a small integrated product team building a command and control solution.

This position is contingent on program award in winter of 2026 with a tentative start date in March of 2026

Desired Skills

Experience integrating software components via machine-to-machine interfaces (e.g., RESTful APIs, ActiveMQ, etc.)

Experience with test automation and continuous integration and deployment

Demonstrated experience working in Agile teams leveraging Scrum, Kanban or other methodologies and/or understanding of Agile development concepts

Strong Presentation Skills

Experience with Cloud environments

Understanding / proficiency in application containerization (e.g. Docker, Kubernetes, etc.)

Strong background developing / debugging and/or testing of web applications and web services

Experience with Elastic Search, Kibana, Logstash (ELK stack)

Other Important Information

By applying to this job, you are expressing interest in this position and could be considered for other career opportunities where similar skills and requirements have been identified as a match. Should this match be identified you may be contacted for this and future openings.

Ability to work remotely

Onsite Full-time: The work associated with this position will be performed onsite at a designated Lockheed Martin facility.

Sample 12:

Overview

BigBear.ai is seeking a Software Engineer to join an ever-evolving project where you will design, develop, and deploy mission-critical tools and solutions. This role involves working closely with customers to understand and support operational requirements, as well as analyzing large data sets to deliver mission-centric insights. You will collaborate with analysts, data scientists, and other software engineers to integrate cutting-edge technologies and solutions that drive impactful results.

What You Will Do

- Software Development: Write production-grade software to be deployed in operational environments
- Maintenance & Monitoring: Monitor software performance and implement updates as needed
- Platform Enhancement: Augment the platform with new tools and technologies to meet evolving mission needs

- Code Reviews: Perform thorough code reviews to ensure quality and compliance
- Stakeholder Collaboration: Elicit requirements from stakeholders to align solutions with mission objectives
- Documentation: Write detailed documentation to support compliance processes and operational workflows

What You Need To Have

- Clearance: Must possess and maintain an active TS/SCI w/ Polygraph
- Education & Experience: Bachelor's degree in a relevant field, plus production-grade software development experience in C/C++, Python, and Java
- Version Control: Familiarity with software version control systems, such as Git
- UNIX/Linux Proficiency: Experience using the command line in UNIX or Linux environments
- Networked Systems: Experience working in multi-node networked environments

What We'd Like You To Have

- Containerization: Experience with Docker or Kubernetes
- Automation Tools: Familiarity with Ansible for configuration management
- Cloud Hosting: Experience with cloud-based hosting environments, such as AWS
- Continuous Integration: Proficiency with CI tools, such as Jenkins

About BigBear.ai

BigBear.ai is a leading provider of AI-powered decision intelligence solutions for national security, supply chain management, and digital identity. Customers and partners rely on Bigbear.ai's predictive analytics capabilities in highly complex, distributed, mission-based operating environments. Headquartered in McLean, Virginia, BigBear.ai is a public company traded on the NYSE under the symbol BBAI. For more information, visit https://bigbear.ai/ and follow BigBear.ai on LinkedIn: @BigBear.ai and X: @BigBearai.

BigBear.ai is an Equal opportunity employer all protected groups, including protected veterans and individuals with disabilities.

Sample 13:

Software Engineer - Mid

- Design, develop, test, and manage application development projects in support of IT infrastructure
- Integrate third-party components and introduce new custom capabilities
- Modify existing code and recommend process improvements
- Automate operations and maintenance tasks
- Develop and implement technical efforts for large-scale data processing and advanced analytics
- Participate in all aspects of the software development life cycle
- Contribute to planning, requirements, development, testing, and quality assurance
- Participate in technical project milestone reviews and code architecture sessions
- Provide resource estimation and development best practices knowledge transfer
- Participate in Program Increments (PIs) and Agile Release Train (ART) activities
- Support the multi-enclave environment (Unclassified, Secret, and Top Secret)
- Collaborate with cross-functional teams to ensure seamless integrationExperience with Agile methodologies
- Understanding of forensic and investigative system requirements
- One or more programming languages: Java, .NET(C#), Python
- Software architecture principles and patterns
- Object-oriented design and development
- Relational Databases and SQL (MySQL, PostgreSQL, Microsoft SQL)
- REST API development and integration
- Git and other source control management systems
- Software development lifecycle (SDLC) methodologies
- Unit testing and test-driven development

Sample 14:

Altamira Technologies has a long and successful history providing innovative solutions throughout the U.S. National Security community. Headquartered in McLean, Virginia, Altamira serves the defense, intelligence and homeland security communities by focusing on creating

innovative solutions leveraging common standards in architecture, data and security. Altamira believes that our people and the culture of our company differentiate us from other companies.

We focus on recruiting talented, self-motivated employees that strive to find a way to get things done. Join our team of experts as we engineer national security!

Altamira is seeking a Software Engineer to help our National Air & Space Intelligence Center (NASIC) customer engineer advanced data management, analysis, and visualization tools to support their critical mission.

Experience

- Demonstrated experience and/or familiarity with Typescript, JavaScript, JSON, Linux Shell/BASH, Docker, YML, git
- Familiarity with Kubernetes, ElasticSearch CRUD, Node.js Express
- Nice to Haves: Experience with Docker Swarm, GitLab CI/CD processes, Python, Kibana, Prometheus, Grafana

Requirements

- Bachelor's degree in Computer Science (or similar) from an accredited college or university
- At least 2 years of professional experience in Software Engineering
- Active TS/SCI Clearance

Sample 15:

Software Engineer (SWE)

Clearance Level: Must have an Active Full Scope Poly to be considered for this position

Location: Fort Mead, MD

Our customer is seeking a Software Engineer to contribute to national security programs with a federal intelligence agency

Responsibilities to include but not limited to:

The Software Engineer will be responsible for developing, maintaining, and enhancing complex and diverse software systems:

- processing-intensive analytics
- novel algorithm development
- manipulation of extremely large data sets
- real-time systems, and business management information systems) based upon documented requirements.
- Works individually or as part of a team.
- Reviews and tests software components for adherence to the design requirements and documents test results.
- Resolves software problem reports.
- Utilizes software development and software design methodologies appropriate to the development environment.
- Provides specific input to the software components of system design to include hardware/software trade offs, software reuse, use of Commercial Off-the-shelf (COTS)/Government Off the shelf (GOTS) in place of new development, and requirements analysis and synthesis from system level to individual software components.

Capabilities: Software Engineer (SWE) shall possess the following:

- Analyze user requirements to derive software design and performance requirements
- Debug existing software and correct defects
- Provide recommendations for improving documentation and software development process standards
- Design and code new software or modify existing software to add new features
- Integrate existing software into new or modified systems or operating environments (U) Develop simple data queries for existing or proposed databases or data repositories

Qualifications:

- Bachelor's degree in Computer Science or related discipline from an accredited college or university is required
- Four (4) years of SWE experience on projects with similar software processes may be substituted for a bachelor's degree.
- Clearance Level: Full Scope Poly

Benefits Include:

- 401k Retirement Plan
- Health Care Coverage
- Health Savings Account
- Pet Insurance
- Flexible Spending Account

PTO:

- 0-2 Years – 21 days
- 2-8 Years – 26 days
- 8-15 Years – 28 days
- 16+ Years – 31 days

Professional Development Program: reimburses Up to $2k per year for classes, seminars, licensing and certifications.

Referral Bonuses: Up to $10,000 referral bonus, both you and the person you refer must be employed by for a minimum of 90 days.

Employee Assistance Program: Offers services to help the well-being of employees and their dependent family members.

Worldwide Travel Assistance: for travel beyond 100 miles of employees' residence

We are an Equal Opportunity Employer.
